## Lithium disrupter changes name to Lithium Australia NL

### HIGHLIGHT

**As pre-empted in a market announcement on 15 July, the Australian Securities and Investment Commission (ASIC) has registered the change of name from Cobre Montana NL to Lithium Australia NL**

The Company is pleased to announce that following the shareholders' recent unanimous approval to change its name from 'Cobre Montana NL' to 'Lithium Australia NL', Australia's corporate regulator, the ASIC registered the change of name on 15 July.

The change of name was effected to better reflect the focus of the company as a developer of disruptive lithium exploration, mining and processing technology.

The Australian Securities Exchange (ASX) will amend the Company's ticker code to LIT in due course. A further announcement will be made when the new ticker code becomes operative to ensure shareholders have the benefit of a smooth trading transition.

Lithium Australia NL is in the process of assessing mica-to-lithium opportunities in Europe, Africa and Australia and will be building a management team commensurate with its aim to control a substantial lithium inventory. The appointment of George Bauk as Chairman is the first step in the management restructuring. Mr Bauk is an expert in strategic metals, heavy rare earths in particular.

Lithium Australia recently completed successful mini-plant continuous lithium carbonate production from ore sourced from Lepidolite Hill (55km south-west of Kalgoorlie, Western Australia). The Company anticipates further mini-plant testing in the current quarter, using mica concentrates from one of the deposits under investigation in Europe.

### ABOUT LITHIUM AUSTRALIA

*Lithium Australia (LIT) has a technical alliance with Strategic Metallurgy Pty Ltd to commercialise disruptive lithium extraction technology based on the recovery of lithium from micas; minerals not generally used as a source of lithium chemicals. LIT has a non-binding Heads of Agreement with European Metals Holdings Limited to process lithium mineralisation at Cinovec in the Czech Republic on a 50/50 JV basis. Cinovec contains abundant lithium micas and is one of the world's largest hard-rock lithium occurrences. In addition, LIT has strategic alliances with Pilbara Minerals Limited, Focus Minerals Limited and Tungsten Mining NL, to investigate lithium and rare metals in prospective locations of Western Australia close to well-developed infrastructure. LIT also has lithium exploration assets near Greenbushes and Ravensthorpe in Western Australia. LIT is also evaluating other European opportunities.*
