

Only Lithium Australia offers direct exposure on the ASX to the booming cathode powder market

Right now, in a cathode powder market on fire, rumours and speculation abound:

👉 Tesla, battering down the doors of a lithium ferro phosphate ('LFP') cell producer to procure 45 GWh of LFP batteries for delivery in 2022;

👉 Apple, negotiating for LFP battery supply to fuel its e-mobility aspirations, and

👉 Mercedes Benz, buying into LFP for its cars at last.

And all this is happening against a backdrop of changes in the intellectual property landscape that have encouraged major South Korean battery producers to enter the fray ... competing for a market share of the safest, most cost-effective and enduring lithium-ion battery money can buy.

Giant battery producers LG and SK too have announced plans to take on their powerhouse competitors in China, where LFP has become so popular.

ASX-listed Lithium Australia NL (ASX: LIT, 'the Company') – through its 100%-owned subsidiary VSPC Ltd – already holds the key to the world's most advanced LFP cathode powder, the force behind this type of battery.

With its processes protected by international patents, the Company's moves to commercialise its LFP technology are well underway.

So, for investment exposure to the most rapidly growing sector of the battery industry, or to partner in producing the world's most advanced LFP batteries,

look no further than Lithium Australia.
